Introduction to Environmental Law: Cases and Materials on Water Pollution Control, Jeffrey G. Miller, Ann Powers, Nancy Long Elder, Environmental Law Institute, 2008, 1585761257, 9781585761258, 958 pages. The study of water pollution control regulation is a study of statutes and their administration. This casebook explores water pollution and the federal statute chiefly designed to control it, the Clean Water Act, and examines how water pollution is addressed, first by the common law and then by statute. An introduction provides the student with an understanding of what constitutes water pollution, where it originates, and how it can be controlled. These materials were originally designed for the introductory course in environmental regulation/environmental law at Pace Law School. A Teachers Manual includes exercises that teach students advanced legal research, familiarity with administrative law mechanisms, and the ability to integrate what they have learned about the Clean Water Act.
